

A600 Environmental Spill Control Polymer Selection Guide

Each of these products can be used in a wide variety of situations. This guide is intended only to provide a possible selection. Refer to the product specification sheets for additional information and possible uses, or contact us for any additional information. We can also help you with custom applications.

*Bond: The unique bonding of the Lenderink / Nochar polymers in most cases literally “solidifies” the liquid contaminate:

Reduces odors, vapors and flammability, making cleanup easier and safer, while lowering costs.

Reduces or eliminates runoff, minimizing contamination.

Changes the Hydrocarbon of oil spills in oceans and lakes to a much safer and controllable floating solid mass.
